

Hosting FAQ -Scripts Auto Installer

Last Updated Sunday, 18 May 2008

All of our CPanel Business and Ecommerce web hosting accounts come with Fantastico De Luxe auto installer included at no extra cost. The following scripts (see below) are available to be installed FREE directly from your web hosting control panel with little more than a few clicks of your mouse. These free scripts can be used to help you to build a full featured dynamic web site at a fraction of the cost of hiring a web design consultant. Click this link to view a flash demo of Fantastico. Fantastico De Luxe is an amazing CPanel/PHP based Web application. It integrates with your control panel and gives you the ability to automagically install the following Open Source Applications: Please Note: The list of applications below was representative at the time of creating this web page. It is possible that the list of applications has changed since that time. New applications not in this list have been included, & some applications may have been discontinued. Version numbers have almost certainly been updated.

More scripts available directly from CPanel control panel

With Fantastico De Luxe you can

- install in the main directory, in addon domains and in subdomains.

Languages

Fantastico currently includes following language files: Dutch, English, Italian, Polish, Portuguese, Spanish.

Please note: Each of the scripts above uses a MySQL database. You should ensure that the web hosting plan that you purchase has enough MySQL databases to support the no. of scripts that you wish to install on your plan. You can find the no. of MySQL databases available on each plan listed in the features table.

The majority of these scripts are open source and are supplied as a service by us without warranties of any kind. We do not provide support for any of these scripts. Support can usually be obtained through forums from the official web sites of these scripts. The scripts listed above were available at the time this web page was developed, however are subject to change. Script versions may be updated, and some of the scripts listed may be discontinued or replaced by other scripts.
